

Objectives

After completing this lab, I will be able to:

- Explore IAM Users and Groups
- Inspect IAM policies applied to groups
- Follow a real-world scenario that adds users to groups and explores group permissions
- Locate and use the IAM sign-in URL
- Experiment with policies and service access

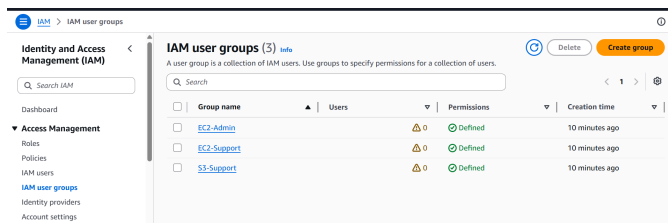

Task 1.1: Explore IAM users, groups, and policies

In this task, I'll explore the IAM users and groups that we created for me.

The list below contains the existing users:

- user-1
- user-2
- User-3

The list below contains the existing groups:

- EC2-Admin
- EC2-Support
- S3-Support

Task 1.2: Manage users and groups

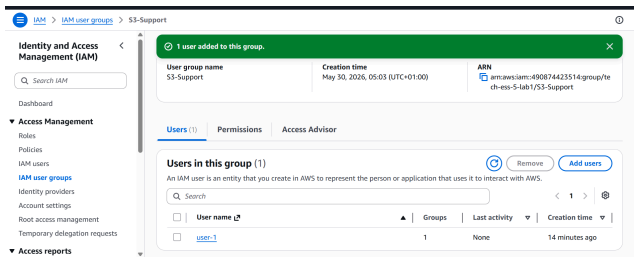

In this task, I'll work with the users and groups, enabling permissions to support a business scenario.

Business scenario

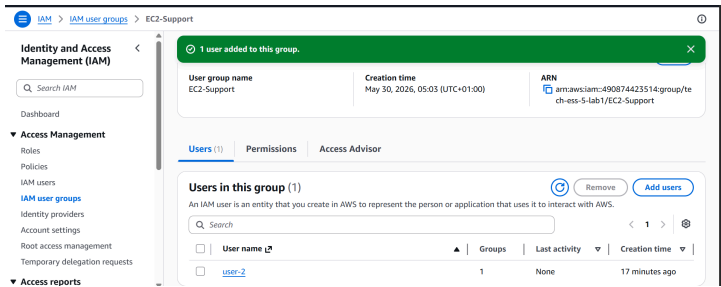

My company’s use of Amazon Web Services grows over time. The company uses many Amazon EC2 instances and a significant amount of Amazon S3 storage. I want to grant access to new staff members based on their job functions, as shown in the table.

User	Group	Permissions
user-1	S3-Support	Read-Only access to Amazon S3
user-2	EC2-Support	Read-Only access to Amazon EC2
user-3	EC2-Admin	View, Start, and Stop Amazon EC2 instances

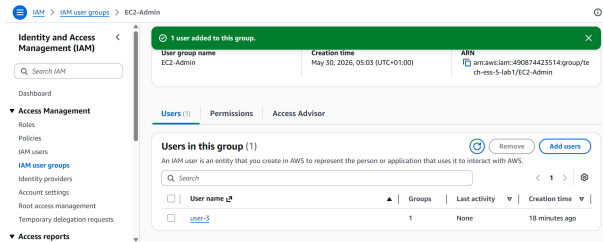

USER 1

USER 2

USER 3

Task 2: Use the IAM sign-in URL

In this task, I tested the permissions of each IAM user then, logged in with different IAM users

WITH THE COMPLETED LAB I CAN NOW CONFIDENTLY

- Explore IAM Users and Groups
- Inspect IAM policies applied to groups
- Follow a real-world scenario that adds users to groups and explores group permissions
- Locate and use the IAM sign-in URL
- Experiment with policies and service access
